First Insight for Exercise 1:

- When looking at the dashboard, the manager will immediately notice that the **East region** generates the highest volume of sales (2,800), driven by a major peak around November 2nd.
- However, despite these high sales, the East region is also experiencing **negative profits (-100)**, which means it is losing money.
- In contrast, the **South region** has lower sales but is highly efficient, generating the maximum profit (**450**).

Insight for Extension 3 (UK City Comparison)

- The Bar Chart is more effective for precision and ranking: It clearly ranks the 15 cities from highest to lowest, showing immediately that London has the highest sales (8,500) and Coventry has the lowest (2,400).
- The Map is more effective for geographic patterns: It provides an instant visual overview of where our market is concentrated, showing that most high-performing cities are clustered in England, while helping regional managers spot gaps in geographic coverage.
- Conclusion: Both visuals are complementary, but the Bar Chart communicates the core sales story more accurately for an immediate performance comparison.

Insight for Extension 4 (Netflix-Style Catalog Analysis)

- Breaking Bad stands out as the highest-rated content in our catalog with an exceptional score of 9.5, followed by The Dark Knight at 9.0.
- The catalog shows a strong focus on the Sci-Fi genre, which represents a large portion of our high-performing titles (Stranger Things, Inception, Interstellar).
- Most of the highly rated contents are modern releases, concentrated between 2010 and 2022, aligning well with current streaming preferences.

Insight for Extension 5 (Training Provider Performance):

1. Best Performance vs Additional Support:
- Cyber Security appears to be performing best, achieving both the highest Pass Rate (92%) and the top Satisfaction Score (4.7).
- Project Management requires additional support immediately, as it shows the lowest Pass Rate (65%) and the lowest satisfaction score (3.2).

2. Relationship between Satisfaction and Pass Rates:
- There is a strong positive correlation between learner satisfaction and pass rates. Courses with higher pass rates (like Cyber Security and Cloud Computing) consistently register the highest satisfaction scores, while tougher courses with lower pass rates (like Project Management) see a

Insight for Extension 6 (Recruitment Analysis)

1. Which role appears hardest to recruit for and why?

- The AI Research Engineer and Cybersecurity Specialist appear to be the hardest roles to recruit for. Despite offering the highest salaries, they received the lowest number of applications (12 and 15 respectively), which clearly highlights a severe shortage of specialized talent in the market.

2. Which role offers the highest salary?

- The AI Research Engineer offers the highest salary in the dataset at £80,000, closely followed by the Cybersecurity Specialist at £70,000.
